Abstract

Astrology is an ancient art that based on Hindu religious scriptures. The movement and positions of celestial bodies can have a profound impact on our love life, work life, and everything in between. A major part of Astrology is using the movements and relationships of the planets to forecast what will be happening in our lives. It is believed that each zodiac sign and planet is connected to the body's parts and functions. Medical astrology is an ancient medical system that searches the mysteries of the possibilities of diseases that are likely to occur in the future. The aim of this study was to display the association of celestial bodies on blood cancer. The random sampling of fifteen blood cancer treating individuals were included in this study and selected for the Kundali (birth chart). The Kundali was prepared on the date and the time of birth of the patients recorded by them. The preparation of Birth-chart, mainly Lagna Kundali, was based on the calendar issued by the Nepal Panchanga Nirnayak Committee. In majority of the patients, the Moon and Mars which is the causal-factor of blood cancer, found to be victimized by the sinful planets like Mars, Saturn Rahu and Ketu. Such relationship between causal-planet (Moon & Mars) and sinful planets (Saturn, Mars, Rahu and Ketu) in analysis showed the possibility of blood-cancer. Hence, it is better to introduce the Medical astrology to prevent the blood cancer in modern practice.

INTRODUCTION

Astrology is a kind of science. It is considered as the light of knowledge. As light shows the objects lying in the darkness so does astrology predicts the person's future activities. And it offers guidelines as for possible. Astrology can introduce the mystery of pre-life of the person's impact on the birth position of the person called Lagna Kundali. It can guess only by the astrology about the past, present and future result of individual's action. It is taken as to be the true tool of astrology. Medical astrology is an ancient medical system that associates various parts of the body, diseases, and drugs as under the influence of the sun, moon, Mars, and planets, along with the twelve astrological signs. It searches the mysteries of the possibilities of diseases that are likely to occur in the future. The astrological horoscopes can assume the reason of the blood cancer disease. This type of cancer is caused by the rapid production of abnormal blood cells; mainly white blood cells in the bone marrow. These abnormal blood cells affect the bone marrow's ability of the production of red blood cells and platelets too.

MATERIALS AND METHODS

In this study, random sampling collection of horoscopes, birth date, location and time was made. The position of the planets in the horoscopes, the Yukti, situation, Dristhi, planet's Kartari, strength of the planets has been detected on the basis of the astrology from different horoscopes.

Total fifteen blood-cancer patients, some have taken curative chemotherapy and some had under the supportive and palliative care after definitive diagnosis of blood cancer were included in the study. Prediction of different horoscopes and Lagna Kundali were generalized by qualitative method for the blood cancer on the basis of astrological influential analysis.

Limitation of the study

This study based on the random sampling of blood cancer patients which were under treatment. The horoscopes are made on the basis of astrology principle and prediction has been done on the basis of the Falit astrology. This study being the inclusion of fifteen blood cancer patients which may not be fully accepted in general but would be needed an extra study and research from the point of medical astrology perspective.

RESULTS

This study explained the fifteen cases based on the Lagna Kundali through the interaction made on the blood cancer patients and their horoscopes that made to identify the case on the main point of the position of the Planets influential on birth.

DISCUSSION

In Eastern philosophy, Astrology is the science related with the Vedic (a famous name hindu too, hindu scriptures). It too has two sides, Siddhantha Astrology which deals with planet, Gochar and condition and Falit Astrology, studies the living animals being influenced by the good and sinful planets. This has connected its point with study the feeling and touch by making birth chart (Lagna kundali), kundali's Falit astro has tried to give the prediction. In this study, the Lagna Kundali had the main role to predict. Remaining Lagnes weak and strong, the person has immunity power to fight with the disease on the condition of disease-bhava being seen by the sinful planets, the blood - causal-factor of Chandra-Mangal (Moon and Mars) may make the person suffered from the blood-cancer disease.

Conclusion

The Mars is considered as a causal-factor of RBC (red blood cell) and Moon as a causal-factor of WBC (white blood cells). Overall, the causal-planets victimized or suffered the native which indicated the probability to occur blood-cancer.
